

OPTO

Controls (Pty) Ltd

Opto Controls Production Monitoring Solution

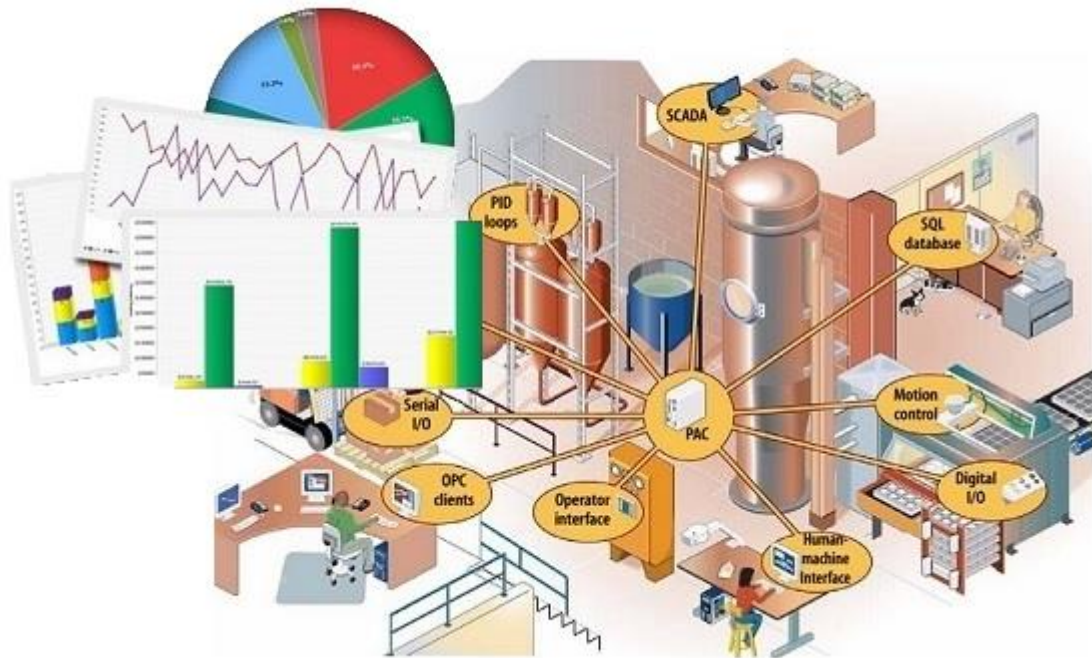

With increasing competition, ever more demanding customers and shrinking profit margins manufacturing is never easy. As a result, companies in the manufacturing industry must find new ways to optimize productivity, improve customer service, expand market share, increase revenue, and minimize expenses. Manufacturing companies therefore need information management solutions that allow them to make better business decisions and they need the tools to take advantage of the information at their disposal.

Our Solution

We offer the manufacturing industry a cost-effective way to improve operations by implementing custom built production monitoring software to report on, analyse, and monitor resource usage through an architecture that helps companies reduce costs, increase revenue, and maximize the value of information.

We achieve this by leveraging all the sources of data available throughout the manufacturing process to deliver a holistic view and actionable data with minimal IT involvement.

Production Monitoring

Benefits

- Monitor trends and patterns to instantly spot deviations.
- Evaluate effectiveness of production activities
- Define and measure key performance metrics.
